

PRODIOSLABS | DATA ANALYST ASSIGNMENT

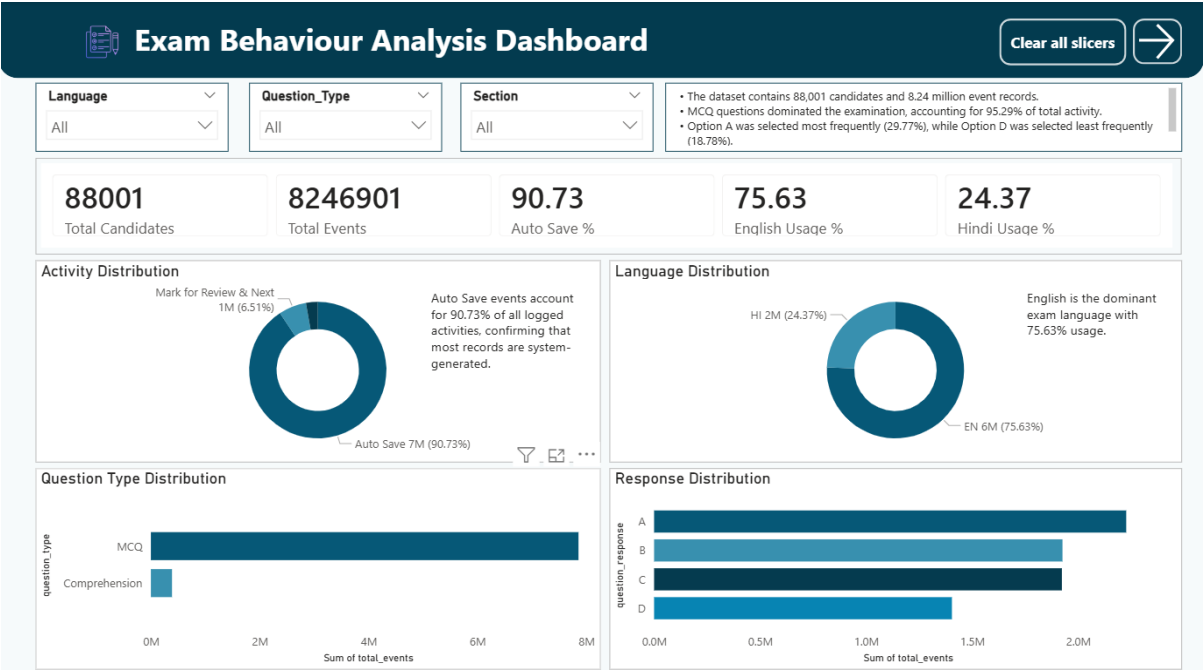

Exam Behaviour Analysis Dashboard

Submitted by: Surbhi Jain

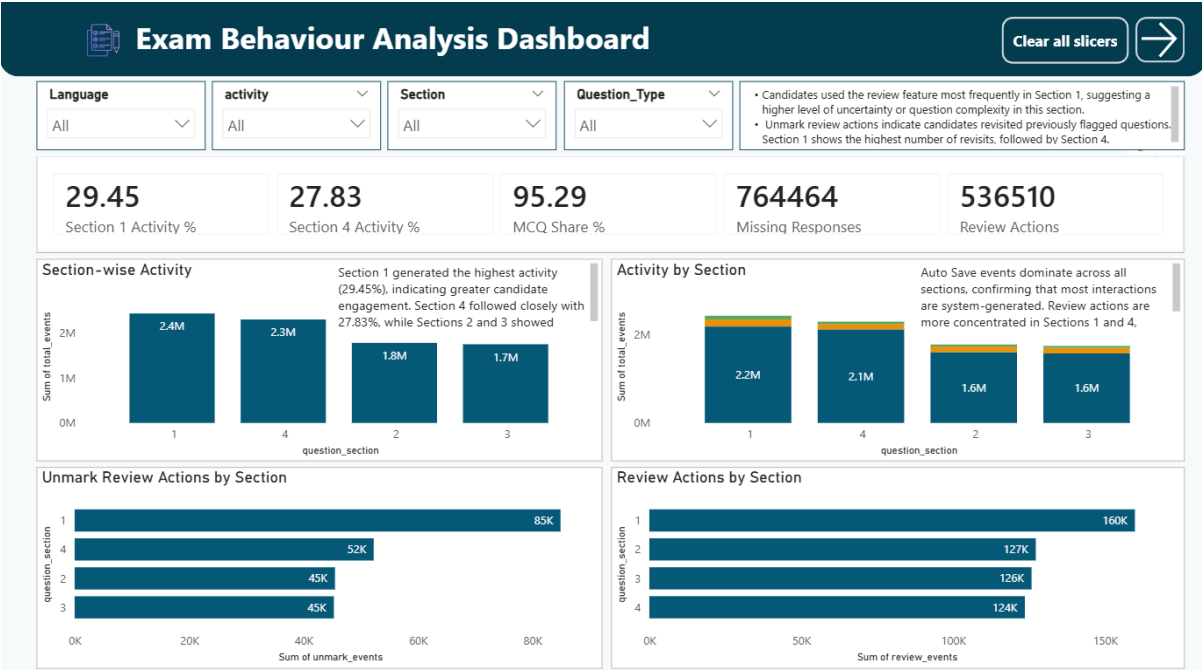

Executive Summary

This report analyzes candidate behaviour using 8.24 million exam event logs from 88,001 candidates. The dashboard focuses on activity distribution, language usage, section engagement, review behaviour, time-based activity trends, and data quality.

Dashboard Page 1 - Executive Summary

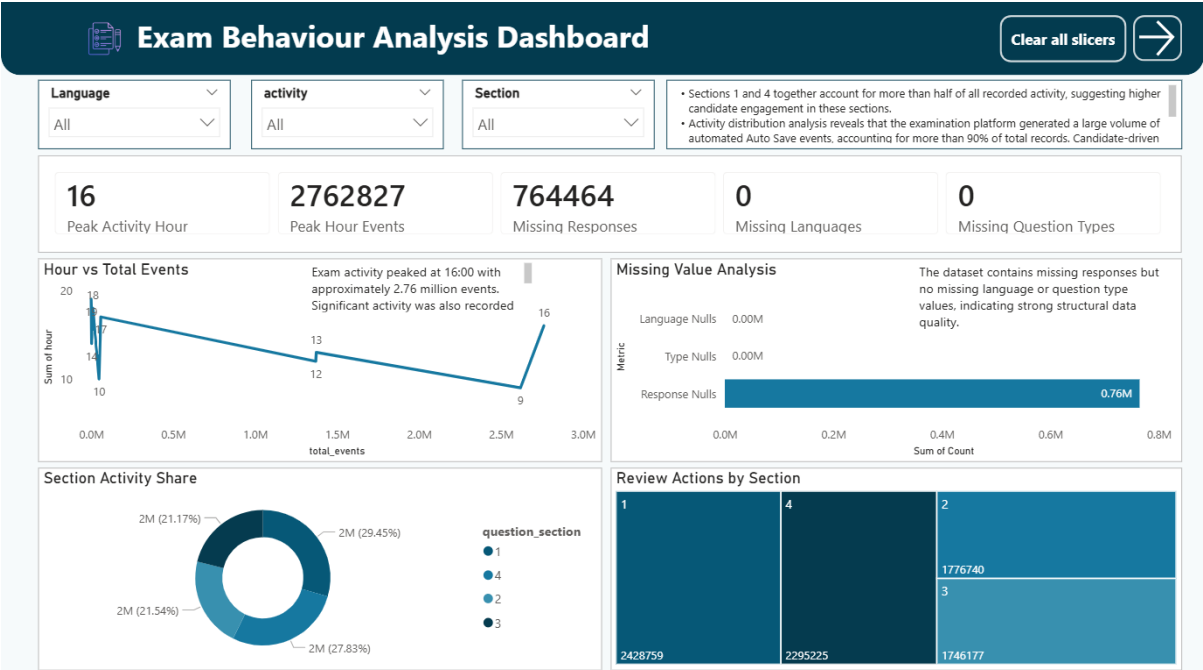

Dashboard Page 2 - Candidate Behaviour Analysis

This page focuses on section engagement and review behaviour. Stacked and clustered charts were used to compare activity across sections and identify areas where candidates reviewed questions most frequently.

Dashboard Page 3 - Time & Data Quality Analysis

This page analyzes activity over time and evaluates data quality. Trend and quality visuals help identify peak activity periods and highlight missing-value patterns.

Key Findings

- Auto Save events account for 90.73% of all records.
- English represents 75.63% of interactions.
- MCQ questions account for 95.29% of activity.
- Section 1 generated the highest engagement.
- Peak activity occurred at 16:00 with 2.76 million events.
- Missing responses: 764,464; no missing language or question type values.
